

- Secure, user friendly drop off & pick up interface
- Security locks and password protection to keep evidence safe while being stored
- Remote monitoring of lockers, and report generation for access logs & usage statistics to ensure a secure and documented Chain of Custody
- Ergonomic access points for all lockers
- Utilizes overhead space to increase storage availability over horizontal locker storage
- Available options for height and width, and multiple locker arrangements to fit your needs
- Second Access Point Option allows for separated storage and retrieval areas

## AUTOMATED EVIDENCE STORAGE LOCKER

The Vidir High Density Evidence Storage Locker System is an automated storage and retrieval system that provides the perfect solution for secure evidence storage, and documented Chain of Custody requirements for Law Enforcement Agencies.

### INTUITIVE SOFTWARE

Intuitive software allows for assigning individual access codes, remote monitoring, and usage logs help document the Chain of Custody that is crucial to maintain, while allowing access any time of the day.

### ALL-METAL DESIGN

The All-Metal Locker design provides high security protection, and peace of mind for stored items.

### VERTICAL STORAGE

The Locker makes use of wasted vertical space to allow a larger number of storage lockers in a narrower footprint. There is no need for expansive widths to provide the number of lockers needed.

### ERGONOMICS

The ergonomic height of delivery for every locker ensures maximum availability and accessibility for all users. Uncomfortable and unnecessary bending or straining to access lockers is thereby eliminated.

### SECONDARY ACCESS POINT OPTION

Separate the Storage and Retrieval access points for even more secure handling of evidence.

Safe Handling • Easy Access • Maximum Storage • Fast Retrieval • Small Footprint
