

ADVANTAGE

Aurora Storage Products Premium Aisle Safety Lock

Aurora Storage Products, Inc. utilizes a high quality ergonomic three spoke carriage drive handle which contains an integral aisle safety lock centered in the hub of the handle. When the aisle safety lock is in the “unlocked” position, the hub is pulled out from the handle and is easily recognized as being in the unlocked mode. When the hub is pushed in, the aisle safety lock is easily recognized as being in the “locked” position. Aurora Storage Products aisle safety lock knob is a full 1-3/4 inches (44 mm) in diameter and can provide a visual recognition as to the safety lock state as well as by feel for those that might be color blind or otherwise visually impaired.

To accommodate those with any type of handicap, hi-density mobile carriage control handles with safety locking knobs or push pins smaller than 1 inch (25 mm) in diameter shall be deemed unacceptable.

Specifications stating *“Visual indicators shall provide verification that carriages are in the locked or unlocked mode”* do not go far enough to accommodate all users if a minimum diameter for the aisle safety lock knob is not stated.

In summary, Aurora’s aisle safety lock has been designed to be robust, ergonomic, convenient, and visual.

Advantage: Aurora.
