

ADVANTAGE

Aurora Storage Products Premium Flush Mount Carriage

Aurora Storage Products, Inc. utilizes a space saving flush carriage design for its high-density mobile systems which keeps the side of the carriage aligned with the face of the shelves and shelf posts. The carriage does not protrude beyond the shelving. This presents a more tailored appearance giving the carriage and shelving a unified appearance. There also is no gap or channel between the bottom shelf and the carriage edge to catch dust and debris.

In addition to better aesthetics, top or flush mount shelving saves more space. Shelving when recessed in a carriage requires 1/2 inch of additional floor space the entire length of the carriage for every movable carriage and stationary platform in the system. That really begins to add up, especially for a larger high-density mobile system.

If another manufacturer's specification states *"Top mount carriages are unacceptable"*, Aurora can provide a similar recessed design, but advises against it and recommends that recessed carriages should be unacceptable. There is no structural reason to recess shelving in the carriage. All shelving is securely anchored to the carriage base, and all of Aurora's Flush Mount Carriages meet all seismic requirements for the location they are installed.

In summary, Aurora's Flush Mount Carriage combined with Aurora Quik-Lok™ 4-Post or Library Case-Type Shelving has been designed to be dependable and long lasting. It is the real space saver. **Advantage: Aurora.**
